Lovable	Advanced
Slack	Experienced
Canva	Experienced
Gemini	Advanced
Notebook LM	Advanced
Finance & Investments	Skillful
Python	Intermediate

LANGUAGES

Spanish	Native speaker
English	B2

EXCHANGE PROGRAM

Exchange Program to Ireland
& United Kingdom
June 2024 – August 2024

Santiago Massieri

First-year Behavioral Sciences student at Universidad de Palermo, an interdisciplinary degree combining psychology, neuroscience, behavioral economics, technology, and data analysis applied to decision-making and human behavior. I'm learning Python applied to finance and data, which I used to build projects like a compound interest calculator and a CEDEAR evaluator. I also use generative AI tools for productivity and no-code product development, and actively manage my own investment portfolio.

EDUCATION

Bachelor's Degree in Behavioral Sciences
Universidad de Palermo, Argentina Mar 2026 – Dec 2030

Interdisciplinary degree focused on the study of human behavior through psychology, neuroscience, behavioral economics, and technology. In English-speaking countries it's known as "Behavioral Science." Throughout the program I develop research tools, consumer analysis, decision-making frameworks, and AI applications in organizational, digital, and business contexts.

High School Degree in Social Science and Humanities
Colegio Manuel Belgrano, Argentina Feb 2020 – Dec 2025

Attended a secondary school with an intensive English language program, emphasizing both language proficiency and academic content in English.

COURSES

AI Skills Fest 2026 <i>Microsoft</i>	Jun 2026
AI Fluency for Students <i>Anthropic</i>	Jun 2026
Claude 101 <i>Anthropic</i>	Apr 2026
Excel: Fundamentals and Tools <i>Universidad Politécnica de Valencia</i>	Feb 2026 – Apr 2026
JA Economics – Economics & Personal Finance Program <i>Junior Achievement</i>	Mar 2024 – Oct 2024

PROJECTS

Compound Interest Calculator – Python
Script that simulates the growth of an investment based on initial capital, monthly contribution, and years, comparing different annual return scenarios.

CEDEAR Evaluator – Python
Script that analyzes the performance of a CEDEAR portfolio, calculating gains in both pesos and dollars adjusted for the CCL exchange rate and suggesting whether to hold, sell, or wait.

Question Evaluator – Python
Script that builds a self-test of programming concepts to review what I'm learning.
